## Do You Have the Time?

Taking care of a pet is a big responsibility. Before choosing the pet you would like to have, determine the amount of time you are available in a day to properly care for a pet. You might find you do not have enough time each day to be a responsible pet owner for the kind of pet you want.

Step One: Estimate the minutes or hours each activity takes from your day.

| Minutes | Hours |  |
| :---: | :---: | :---: |
|  |  | sleep <br> breakfast (prepare/eat/clean up) <br> get dressed/brush teeth/comb hair <br> travel to school <br> school day <br> travel home from school <br> homework <br> dinner (prepare/eat/clean up) <br> hanging out (sports/hobbies/friends/family) <br> get ready for bed |
| Total Minutes | Total Hours |  |

Step Two: Add the numbers within each column to find the total minutes and the total hours these activities take each day.

Step Three: Transfer the number of total minutes you calculated on page 26 to the space inside the division problem. To convert your total minutes into hours, divide your number by 60 (the number of minutes in one hour).
$6 0 \longdiv { }$
*Round this number to the nearest hour.

Step Four: Copy the number (rounded hours) from Step Three to the addition problem below. Transfer the hours you calculated from page 26 to the addition problem below. Add these two numbers together to find the total number of hours you spend on activities each day.

- (minutes converted to hours from above)
- (your number of hours from page 26)

Step Five: Transfer the total number of hours from Step Four into the subtraction problem below.
